**ANNOTATED BIBLIOGRAPHY OF METALLOGENIC MAPS
[MATERIAL MOSTLY PUBLISHED BETWEEN 1960 AND 1987]**

Compiled by

Michael P. Foose and Karen Bryant

1993

U.S. Geological Survey Open File Report 93-208A

This report is preliminary and has not been reviewed for conformity with U.S. Geological Survey editorial standards. Any use of trade, product, or firm names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

**ANNOTATED BIBLIOGRAPHY OF METALLOGENIC MAPS
[MATERIAL MOSTLY PUBLISHED BETWEEN 1960 AND 1987]**

INTRODUCTION

This annotated bibliography of metallogenic maps was compiled under the auspices of the Subcommission for Metallogenic Maps, a part of the Commission for the Geologic Map of the World. The compilation was made largely from material available at the United States Geological Survey's Headquarters in Reston, Va., U.S.A., but has been supplemented by references added by other subcommission members. Because metallogenic maps are of very diverse types and published in many different ways, it is recognized that this bibliography is not complete. However, it is hoped that it will provide a useful listing of most of the major and readily available maps that have been produced relatively recently.

The following guidelines were used in compiling these references.

Date: Most of the citations are for maps published after 1960. This date was arbitrarily selected in order to restrict the number of maps in the bibliography and to focus on relatively modern references. Some older maps which were considered important references are listed in the bibliography.

Size: The areas covered by individual maps vary greatly. In general they cover significant political or geographic areas. Thus, maps of states and provinces are included, but those of smaller subdivisions, such as quadrangles, are too detailed for this compilation. Similarly maps were not included if their scale was so small and the information so general that they could not be a working source of information.

Other Publications: Many books and journals contain maps. Some of these are included. An attempt has been made to cite only those maps which can serve as a useful source of information without extensive reference to accompanying text. Thus maps that were simply supplements to discussions of metallogeny or metallogenesis are generally excluded.

Descriptions and codes have been added to most references. The descriptions give the major elements or commodities shown on the map. The codes indicate the manner in which metallogenic information is displayed. The codes are:

- A- map symbols show the specific metals/minerals present in each deposit.
- B- map symbols do not show the specific metals/minerals present in each deposit.
- C- map shows geologic character of the deposit.
- D- map does not show the geologic character of the deposit.
- E- map includes regional geologic information.
- F- map does not include regional geologic information.
- S- deposit size is specifically indicated by grade and/or tonnage information.
- O- deposit size is not specifically indicated.

ACKNOWLEDGMENTS

Most of the data was compiled at the U.S.G.S. Additional contributions were submitted by other members of the subcommission for metallogenic maps. These include additions offered by Dr. Ian Speden (New Zealand), Dr. W.E. Petrascheck (Austria), Dr. G.B. Leech (Canada), Dr. G.P. Salas (Mexico), Dr. J.N. Casey (Australia), and Dr. D.V. Rundquist (USSR).
